

Digital Humanities Projects

Merve Tekgürler
05/29/2025

Let's look at the syllabus

<https://bcourses.berkeley.edu/courses/1544775/assignments/syllabus>

Syllabus

1

Attendance

This course is synchronous and attendance is required

2

Individual Project

The purpose of the individual project is to build necessary analytical skills to study the code and digital approaches behind various projects.

3

Group Project

The group project will require you to work in small groups (3-4 students) and develop a project that answers a clearly defined question using computational methods.

4

Video Reflection

Record a 3-5 minute video that demonstrates thoughtful reflection about how your ideas regarding digital humanities research grew throughout this course. Use specific examples and perspectives from your individual and group projects.

Assignments and Grading

- Attendance and Participation: 10%
- Individual Project
 - Short Paper: 20%
 - Presentation: 10%
- Group Project
 - Topic Statement: 10%
 - Short Paper: 15%
 - Repository: 25%
- Video Reflection: 10%

Grading is straight scale: A=90-100; B=80-89; C=70-79; D=60-69; F<60

What's the goal of the individual project assignment?

- Familiarize yourself with how digital humanists use Python
- Study and analyze other researchers' code and reproduce it
- Critically evaluate digital humanities work, its data, sources and approaches as well as its design and coding decisions
- Literature review for your group project (not required)

Reviews in DH

<https://reviewsindh.pubpub.org/>

Reviews in Digital Humanities, edited by Dr. Jennifer Guiliano and Dr. Roopika Risam, is the pilot of a peer-reviewed journal and project registry that facilitates scholarly evaluation and dissemination of digital humanities work and its outputs. We accept submissions of projects that blend humanistic and technical inquiry in a broad range of methods, disciplines, scopes, and scales. These include but are not limited to: digital archives, multimedia or multimodal scholarship, digital exhibits, visualizations, digital games, and digital tools.

Time for doing some research!

Where to Look for Projects

Computational Linguistics/Natural Language Processing	https://aclanthology.org/ https://www.nature.com/palcomms/
Machine Learning	https://paperswithcode.com/ https://zenodo.org/
Digital Humanities Journals	https://www.digitalhumanities.org/dhq/ https://eupublishing.com/loi/ijhac https://openhumanitiesdata.metajnl.com/ https://academic.oup.com/dsh
Field Journals	https://culturalanalytics.org/ https://journalofdigitalhistory.org/

Group Project

Now, this is your time to apply your skills to a real life question.

For your group project, you are expected to form groups of 3–4 students and identify a very concrete research question.

First, let's brainstorm a little bit

Brainstorming

Attendee name
